DETAILED ACTION

Allowable Subject Matter

1. Claims 1-3, 6, and 7 are allowed.
2. The following is an examiner's statement of reasons for allowance:

U. S. Patent No.5,079,496 to Pierret et al. is the reference closest to the claimed invention. Pierret et al. disclose a method for detecting a signal comprising: measuring the signal at a predefined sampling rate to provide measured values; storing the measured values in a buffer memory; and forming a median value of the stored measured values in a time-slot pattern slower than the sampling rate to obtain an averaged signal value. However, Pierret et al. do not teach a method for detecting and reducing noise in a battery voltage signal comprising: measuring the battery voltage signal at a predefined sampling rate to provide measured values; storing the measured values in a buffer memory; checking whether a number of the measured values stored in the buffer memory has reached a threshold value; forming a median value of the stored measured values in a time-slot pattern slower than the sampling rate if the number of values stored in the buffer memory has reached the threshold value; and compensating for noise in the measured values using the median value; and including all of the other limitations in the respective independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
